

How to Convert Email to Text Message

1. Ask the text message recipient for the recipient's cell phone number and wireless service provider.
2. Identify the email domain for the recipient's cell phone number. The most popular wireless providers and their email domains are Verizon (vtext.com), AT&T (txt.att.com), SprintPCS (messaging.sprintpcs.com), T-Mobile (tmomail.com), Boost (myboostmobile.com), Virgin Mobile (@mobl.com), SprintNextel (messaging.nextel.com) and Straight Talk (vtext.com).
3. Open your local or web-based email application.
4. Open a blank email document to compose a new email message, or open an existing email you wish to convert to a text message.
5. In the email message "To:" field enter the recipient's 10-digit phone number (including area code) without spaces. Type the @ symbol followed by the wireless provider's email domain (e.g. number@vtext.com).
6. Compose the email message, or add comments as needed to an existing email message.
7. Send the email message. The email message will be sent to the recipient's cell phone as a text message.
